

# Website Design and Development

Last Updated Wednesday, 16 April 2008

We build websites and easy-to-use tools to manage your site. Essentially, we provide a secure, stable platform for you to communicate with potential buyers.

Our most primary service is building great websites that accomplish business objectives. We build sites using completely modern design styles and coding. Our sites are secure, even for online transactions and ecommerce. Our backend tools provide a way for you to manage the content on your site without having computer programmers on staff. If you can surf the Web and use common software like Microsoft Word, you can manage your site using the tools we provide. This means you can make an initial investment in a great website and you can manage costs by having an office assistant make unlimited, easy updates. Choose Websitesfordevelopers.com for:

- contemporary, not trendy website design
- backend tools to manage your website with no programmers on your staff
- secure hosting and ecommerce
- email accounts using your domain name
- great service and support
